

ENVIRONMENTAL PRODUCT DECLARATION (EPD)

ACCORDING TO ISO 14025 & 15804+A2

PRODUCT: LABDA FLIPTOP I 436/63

casala

Environmental Product Declaration (EPD)

An Environmental Product Declaration (EPD) is a Type III environmental declaration that quantifies environmental information about the life cycle of a product. This can enable comparisons between products fulfilling the same function. The methodology to produce an EPD is based on the full product life cycle assessment (LCA), following the ISO 14040 series of standards.

LABDA FLIPTOP I 436/63

A folding tabletop and a solid, floating frame make Labda Fliptop the ideal table for rooms with changing configurations. Labda Fliptop can be stored nested for optimal space saving. The fliptop mechanism is very user-friendly so that the tables can be set up and removed in no time. The solid frame with round tube is now also available with square tube. A modesty panel makes Labda Fliptop even more suitable for educational and conference rooms.

Casala's production facility has a solar park which produced 4.5t Kwh in 2023. The remaining energy needed is produced by European Wind as stated by the supplier. The production facility and almost all 3rd parties are ISO 9001 & 14001 certified.

Variant	Labda Fliptop I, round tube, 160x80 cm
Base	Welded steel chassis
Finish	Powder coating
Technical life span	15 years
Dimensions (HxLxW)	76 x 160 x 80 cm
Weight	34.0 kg
Packaging weight	0.2 kg

GLOBAL WARMING POTENTIAL

To quantify and compare results, we use the Global Warming Potential (GWP) expressed in kg CO₂-equivalent. This is a measurement method for finding out the amount of energy required to emit 1 tonne of a gas, which is absorbed over a 100-year period. The greater the GWP, the more a particular gas warms the earth.

To comply with EN ISO 15804+A2, Casala uses the 'cradle to grave' assessment for their EPD files. The assessment covers the full life cycle of a product; from production phase to use, followed by recycling or disposal. Other EPD files often only use the 'cradle to gate' assessment, which only covers the production phase.

GWP per unit (Cradle to Grave)	60.212 kg CO ₂ eq.
GWP per unit (Cradle to Gate)	52.100 kg CO ₂ eq.
Average GWP for rectangular desk 160 x 180 cm according to the Furniture Industry Research Association (Cradle to Gate)	35.000 kg CO ₂ eq.

THE ASSUMED PERCENTAGE OF WASTE PROCESSING

Landfill	3.92 %
Incineration	58.84 %
Recycling	34.14 %
Re-use	3.10 %
